## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 1\_Q6

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Joey is learning about bitwise operations and is working on a project that involves extracting specific bits from integers. He needs to write a program that takes an integer and the number of bits N as input and outputs the value of the lowest N bits of the integer.

Help Joey in his project to understand and visualize how bitwise operations work in practical scenarios.

##### ***Input Format***

The first line of input consists of an integer X, representing the given integer.

The second line consists of an integer N, representing the number of bits to extract.

### Output Format

The output displays "Result:" followed by an integer representing the value of the lowest N bits of the given integer.

Refer to the sample output for formatting specifications.

### Sample Test Case

Input: 85

2

Output: Result: 1

### Answer

```
// You are using Java
import java.util.Scanner;
import java.lang.Math;
public class Main{
    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        int a = sc.nextInt();
        int b = sc.nextInt();
        int r=0;
        for(int i=0;i<b;i++){
            r+=Math.pow(2,i);
        }
        r=a&r;

        System.out.println("Result:" + r);
    }
}
```

Status : Correct

Marks : 10/10
